### • Full Stack Web development Trainee At AccioJob

Learning Data Structure and algorithms as well as full stack web development

## Projects

- **Snake Game (JAVA)** [o CODE](#) [o Screenshots](#)
  - In this game **the player controls a snake. The objective is to eat as many Enemy as possible(length and Score will be increase)**. Each time the snake eats an Enemy its length will increase and Score will update on right Corner . The snake must pass through the walls but avoid its own body if snake touch its own body you will be loose game . Using **SPACE** button you can Restart game.
- **Hotel Management System (JAVA, SQL)** [o CODE](#) [o LIVE DEMO](#)
  - Build a Hotel management system using **Java , SQL and Swing**. I Store my all data in SQL. I have created Conn class to Execute query from SQL. I have added there are multiple functionalities like Add Room , Add Customer ,Search Room , Customer Information and many more. In New customer Form you will be able to see ID , ID Number, Name , Gender , Room Number and etc Using add button able add Data.
- **Bubble Game (HTML, CSS, AND JAVASCRIPT)** [o CODE](#) [o LIVE DEMO](#)
  - Build a simple Bubble Game mainly using **JavaScript** . **Bubbles pop** up randomly on your screen. If **you click in 1.5 minutes** the next bubble comes up and get a score out of **10** otherwise you will **lose the game**
